PREPARING FOR FUTURE HISTORY

LETTER FROM THE CHAIRMAN

We have no idea what kind of computers

our great-great grandchildren will have in 2113. We are notoriously bad at that kind of guessing game.* Writer Andrew Hamilton, musing about “computers in the future” in the March 1949 issue of *Popular Mechanics*, couldn’t possibly have predicted the World Wide Web, smartphones, or Google Glass (sidebar image).

We do know, however, that our descendants in the 22nd century will want to understand the story of how their computers came to be, just as we do. That gives the Computer History Museum two equally important but different missions: (a) explaining the history to people today, and (b) preserving the artifacts and stories that people 100 years from now (or 500!) will need to construct the explanations for their day.

We’ve been doing that for over thirty years, but with continually evolving activities. Here are some of our priorities for the next several years:

Increase the focus on software

Collect source code and running software, and the stories behind its creation and use. Work to keep those artifacts usable and instructive in the future.

Interpret software history and the impact on our civilization. Our planned *Make Software, Change the World!* exhibition, for example, will propel us in this direction.

Provide storage and public access to digital objects

Our digital repository project provides secure accessible cataloged storage for the increasing part of our collection that is made of bits rather than atoms: software, digital documents, photos, videos, oral histories, and more.

Expand the physical collection

Our warehouse in Milpitas, which stores the physical objects and documents not currently on display, is now about 85 percent full. We have to do something when it gets to 100 percent in a few years!

More demonstrations & interactive exhibits

Our restored IBM 1401 computers will be the centerpiece of a new “time machine” exhibit on computing in the 1960s.

Increase the outreach to new audiences

Continue to diversify our offerings to students, entrepreneurs, and the general public. We’re not just the “museum for geeks!”

Broaden our offering beyond the building, with more radio, TV, and web presence.

Market the Museum so we’re no longer, as a writer said a few years ago, “the best-kept secret in Silicon Valley.”

Incidentally, our name is the Computer History Museum, but the word “computer” is gradually becoming obsolete. It evokes images of large boxes that fill rooms or small boxes that sit on desktops, and modern intelligent devices don’t take that form. Every inanimate man-made object will soon have embedded intelligence and thus be a “computer.” Perhaps someday we’ll change our name, but in the meantime we increasingly view “computer” not as a specific kind of object, but as a metaphor for any software-controlled device, be it a video screen or a pencil.

Welcome to the new world of the smart gizmo! We’ll preserve its history, whatever it’s called, and whatever it looks like.

LEN SHUSTEK
CHAIRMAN OF THE BOARD OF TRUSTEES

uum tubes and weighs 30 tons, computers in the future may have only 1000 vacuum tubes and perhaps weigh only 1½ tons.

*For an amusing illustrated catalog of our failures in that regard, see *The History of The Future: Images of the 21st Century* by Christophe Canto and Odile Faliu, Flammarion, 1993, Paris, 160 pages.

Cover: Detail image of RCA’s Drum type printer print head (ca. 1960). Hammers pushed paper and inked ribbon onto the appropriate characters as they came around on the constantly rotating drum.

Opposite page: Detail of Jos W. Fowle’s Elizur Wright Arithmeter, No. 11 (ca. 1869). The Elizur was designed by “The Father of Life Insurance” to make accurate insurance calculations.

CONTINUING OUR GROWTH

LETTER FROM THE CEO

As our fiscal year ended June 30, 2013, the Museum experienced a surge of visitors from around the world, a satisfying financial result, and a strong sense that we are well into a new era in our wonderful history as an institution.

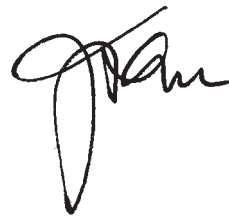

You will see the words, pictures, and statistics in this annual report—our fifth published report as a Museum. They include an award-winning year for our Education team, which won the Superintendent's Award for the best education program in California from the California Association of Museums. They also include record attendance, another 12 months packed with conferences and meetings in our unique facility, and a period of generous giving by donors both locally and throughout the country. Our *Revolutionaries* series set viewership and listener records in our second year on KQED public television and radio, and our YouTube channel surpassed 4 million views.

Thanks to the work of our teams in collections, exhibitions, development, and operations, we closed Fiscal 2013 with the sounds of circular saws, hammers and power drills once again echoing through the halls of the Museum. Under construction now, and scheduled to open in late 2013, is *The IBM 1401 Demo Lab*—a unique permanent exhibit featuring our two fully restored IBM 1401 computer systems. At the height of its prominence in the mid-1960s, the IBM 1401 represented half of all computer systems operating in the world. Its success far exceeded IBM's original market projections, and the system ushered in an area of electronic data processing that set the stage for the mainframe systems that changed the world.

The Demo Lab will be a bit of time travel. It will allow visitors to stand in a space that feels very much like a vintage computer room. It will allow them to have a tactile experience not entirely possible today—where you can see code being written on punched cards, hold a panel of core memory in your hand, gaze at the actual circuitry powering the central processing units, and hear the unmistakable sound of the chain printer producing a result. It will also be a human experience: visitors on selected days will engage with a wonderful team of dedicated volunteers who have invested tens of thousands of hours in restoring two 1401 systems to remarkable working order.

I hope to see you at the Museum this year as we carry forward with this work. Most of all, I want to take the opportunity to say thank you for all that you do to help make this growth possible. This issue truly is a report to a remarkable community of supporters, and all of us at the Museum extend our gratitude and personal thanks.

Yours sincerely,

JOHN C. HOLLAR
PRESIDENT AND CHIEF EXECUTIVE OFFICER

ABOUT THE MUSEUM

The Computer History

Museum is the world's leading institution exploring the history of computing and its ongoing impact on society. The Museum is dedicated to the preservation and celebration of computer history and is home to the largest international collection of computing artifacts in the world, encompassing computer hardware, software, documentation, ephemera, photographs, oral histories, and moving images.

The Museum brings computer history to life through large-scale exhibits, an acclaimed speaker series, a dynamic website, docent-led tours, and an award-winning education program.

HOURS

Wednesday–Sunday
10 am–5 pm

SUPPORT

Generous contributions from individuals like you support our work in collections, exhibit development, and educational programming. We strive to foster greater understanding of the computing revolution's worldwide impact on the human experience. Please help us tell the fascinating stories of the Information Age by making a gift today. Go to computerhistory.org/contribute/
